Additional Requirements — Campus Recruitment System

These are new points not present in the existing spec. Organised by module.

College Group Module *(new module — not in current spec)*

- College group can declare all entities under them (e.g., BE, MCA, MBA institutes and multiple BE campuses under one group)
- College group can define a shared employer pool — a company approved once gets access to all entities under the group
- College group can upload accreditations and certifications (e.g., NAAC grade, NBA, NIRF ranking)

College Module

- College can list famous or notable alumni (name, role, organisation) as a credibility signal to employers
- College can declare active recruitment seasons (odd sem, even sem, graduation cycle) so employers know when to engage
- College can declare department-wise student counts and branch availability to help employers target specific talent pools
- College can publish its placement policy document publicly — visible to employers before onboarding
- College can mark certain drives as priority for their students (e.g., PSU, government, or core sector roles)

Employer Module

- Employer can create a talent pool or wishlist of students to track across drives, even before a formal opening exists
- Employer can mark a college as a preferred partner — unlocks early calendar access or priority booking slots
- Employer can declare bond or service agreement terms upfront as part of the job posting

- Employer can set role-specific eligibility at sub-branch level (e.g., CS and IT only, not EE or Mechanical)
- Employer profile can display verification badges (e.g., MSME registered, listed company, DPIIT-recognised startup)
- Employer can see year-over-year retention data — how many hires from a given college are still with the company — visible as a trust signal to colleges

---

Student Module

- Student can set a "not interested" flag on specific companies — hidden from the employer, for personal tracking only
- Student can upload competitive exam scores (GATE, CAT, GRE, GMAT) as part of their profile
- Student can opt into or out of alumni visibility — controls whether their profile appears to current students as an alumnus

---

Event & Scheduling

- System can auto-suggest optimal drive dates based on college calendar, employer preferences, and student academic load — avoiding exam blocks and back-to-back conflicts
- Events can have a waitlist — if a confirmed student withdraws, the next eligible student on the waitlist is auto-notified

---

Hiring Data & Insights

- Platform generates a post-drive summary report automatically for all three parties — college, employer, and students
- System tracks offer-to-joining ratio per employer — visible to college admins to assess employer reliability over time

---

Compliance & Trust

- System can flag employers who repeatedly cancel drives or show low reliability — visible to

college admins as a warning indicator

Total new points: 21 (including 3 user-defined)
