PDF Requirements Gap Report — Partial & Missing Items

Validation source: `brdtext.txt` vs `placement_system_full_spec.pdf` Total gaps identified: **5 Partial, 7 Missing**

Partial Coverage (5 items)

These requirements exist in the PDF but the specific sub-requirement from the txt is not captured as a named point.

P1. Super Admin — Approve Companies/Colleges & Monitor Analytics

PDF coverage: Admin role listed under §1 (User Roles) — generic.

What's missing as a point:

- Admin can approve or reject company and college registrations
- Admin can monitor platform-wide activity and analytics dashboard

---

P2. Student Location / Relocation Preference at Application Level

PDF coverage: §2.4 covers salary/location expectation as a profile field.

What's missing as a point:

- Student can specify location preference or willingness to relocate at the time of submitting each individual application (not just as a static profile field)
- This feeds into employer filtering per drive, not just general matching

---

P3. College Ranking System

PDF coverage: §12 (Hiring Data & Insights) captures stats and engagement data.

What's missing as a point:

- A college ranking or credibility score derived from placement %, salary outcomes, and company quality
- Visible to employers as a decision-making signal when selecting colleges

---

P4. Student–Job Matching Engine

PDF coverage: §9 covers employer filtering colleges by facility; §3.3 covers eligibility filters.

What's missing as a point:

- A dedicated matching engine that recommends jobs to students based on skills, CGPA, location preference, and past hiring trends
- Reverse direction: suggests suitable candidates to employers

---

P5. Integration Specifications (Zoom / Meet, Email Providers)

PDF coverage: §9.2 notes "online interview capability" at the college facility level.

What's missing as a point:

- Platform-level integration with video conferencing tools (Zoom, Google Meet) for conducting virtual interviews and events
- Integration with email/SMS delivery providers (e.g., SendGrid, MSG91) for the bulk communication module
- LinkedIn profile import (optional) for student profile enrichment

---

Missing Items (7 items)

These requirements are clearly discussed in the txt but have no corresponding point in the PDF.

M1. Student Academic Data Access by Employer

From txt (section J): Employers can view student CGPA, semester-wise marks, and backlogs. Visibility is college-controlled with optional student consent.

Points to add:

- Employer can access student academic records (CGPA, semester marks, backlog status) subject to college approval
- College controls visibility of academic data per employer or per drive
- Student consent can be made mandatory (configurable)

M2. Application Deadline / Last Date of Application

From txt: Each job or drive has a strict application end date. System blocks applications after the deadline. Countdown timer shown on UI with reminders at 3 days and 1 day before.

Points to add:

- Each job posting / drive has a configurable application start date and end date
- System enforces hard cutoff — no applications accepted after deadline
- Automated reminder notifications sent to eligible students before deadline

---

M3. Employer — Resume Download or Online View

From txt (section J): Employer can download a student's resume as PDF or view the structured online profile. Resume versioning and "last updated" indicator noted.

Points to add:

- Employer can download student resume (PDF) or view structured online profile
- Resume versioning supported — employer sees the most recent version
- "Last updated" timestamp displayed alongside resume

M4. College — Alumni (Ex-Student) Participation

From txt: College can permit ex-students (alumni) to apply to jobs and participate in placement drives. Enables stronger employer engagement and broader placement outcomes.

Points to add:

- College can enable alumni (graduated ex-students) to participate in active placement drives
- Alumni participation is configurable per drive — not system-wide by default
- Alumni profiles are distinguished from current student profiles in employer view

---

M5. College — Bulk Student Upload (Excel)

From txt: College can upload students in bulk via Excel file to populate the student database, rather than individual manual entry.

Points to add:

- College can bulk-upload student records via Excel / CSV file
- System validates and maps fields (name, roll number, branch, CGPA, contact) on upload
- Duplicate and error handling with a per-row report after upload

---

M6. Dream Company / Category-Based Rule Override in Rule Engine

From txt: Colleges distinguish between "dream" and "non-dream" companies. A student who has received a non-dream offer may still be eligible to apply to a dream company, overriding the standard offer-limit rule.

Points to add:

- Rule engine supports company categorisation (e.g., dream, super-dream, open)
- College configures eligibility rules per category — a student with one non-dream offer may remain eligible for dream company drives
- Category tagging applied at the employer / drive level during setup

---

M7. Resume Parsing & AI-Assisted Features

From txt: Resume parsing to auto-extract skills and education. AI features including resume scoring, auto-shortlisting, job recommendations to students, and interview question suggestions.

Points to add:

- System parses uploaded resumes to auto-populate skills, education, and experience fields
- AI-based resume scoring to rank candidates against a job's requirements
- Auto-shortlisting suggestions for employers based on eligibility and match score
- Job recommendations surfaced to students based on their profile and employer preferences
- Interview question suggestions generated based on job role and candidate profile (optional / future phase)
